

BRAIN

A JOURNAL OF NEUROLOGY

Cover image: Focal lesions that result in an inability to empathize (i.e. to recognize, share in, or make inferences about another person's emotional state) include damage to the right orbitofrontal gyrus anterior cingulate, anterior insula, temporal pole, amygdala, and thalamus. These areas are outlined on a glass brain in anterior-lateral view, merged with an artist's depiction of impairment in emotional empathy. From Hillis. Inability to empathize: brain lesions that disrupt sharing and understanding another's emotions. pp. 981–997. Image created by Andrew Gaddis and Kenichi Oishi.
